

Castrol Braycote 248

Corrosion Preventive Compound
Petrolatum, Hot or Cold Application, Soft Film

Description

Braycote 248 is designed to protect machined, unpainted metal surfaces from the effects of indoor or shed exposure for periods of six months or more. It is especially suitable for the preservation of anti-friction bearings in storage or shipment.

Application

Braycote 248 may be applied by dipping at temperatures from 160°F to 180°F (71°C to 82°C). It may be brushed or swabbed on at room temperature when its consistency resembles a soft grease, or at elevated temperatures when it resembles an oil. Hot spray applications can be used for protecting large pieces of equipment that are too large in size for dipping applications. Optimal performance can be achieved only when the metal surfaces to be protected are clean, dry and free of rust, oil and mill scale.

The coverage of Braycote 248 will widely vary dependent on the method of application and surface geometries. Parts allowed to reach the temperature of the compound before removal from the tank. Approximate coverage and film thickness data for the different methods are given in the following table:

Method	Film Thickness Mils	Coverage Ft ² /Gal
Quick Dip	30 to 60	30 to 50
Brush or Swab, Hot 160°F to 180°F (71°C to 82°C)	5 to 20	80 to 300
Brush or Swab	10 to 30	50 to 160
Hot Spray, per coat	3 to 10	160 to 500
Slow Dip 160°F to 180°F (71°C to 82°C) *	1.2 to 1.6	1000 to 1300

Additional Information

Removal

Braycote 248 may be removed by solvent or steam cleaning.

Packaging

Braycote 248 is available in 400 pound drums, 35 pound pails and 12/1 pound cases.

Specifications

Braycote 248 meets the requirements of specification and is qualified to MIL-C-11796C, Class 3. This product is identified by NATO Code: C-627.
